

M2M Integration

Wavecom Quik Integration Package

The AIRDESK Integration Package is designed for the experienced System Integrator who requires a simplified development platform that provides a low risk and cost effective way to integrate the wireless engine into their machine-to-machine (M2M) device.

The Wavecom Quik Integration Package enables System Integrators with all the tools necessary to easily plan, develop, integrate, manage, and test the wireless connectivity of their end product. The AIRDESK WaveCom Quik Integration Package is the perfect "Jump-Start" to your M2M project. This package is ideal for Integrators who desire a structured design approach to their application development, whether it is in the areas of fleet management, security, vending machines, alarm monitoring, healthcare or other M2M verticals.

Integration Package Incorporates:

- Project Planning Support
- Engineering Support
- Documentation Package
- Two Test Modules
- Subscription to AirSource
- Provisioning Test Package*
- Module Developer Kit

*Customer activation required

AIRDESK is the leading provider of best-in-class wireless data solutions and services. Specializing in machine-to-machine (M2M) communications, AIRDESK eases the complexity of wireless data implementations for customers seeking rapid and efficient M2M deployments. AIRDESK combines its extensive wireless industry expertise with technology, professional services, activation and airtime to create customized solutions. The Company's AirAlliance Network of more than 50 partners includes leading wireless carriers and manufacturers such as Wavecom, Nokia, Motorola, Kyocera, Sony Ericsson, Enfora, T-Mobile, Verizon Wireless and innovative systems integrators.

Wavecom Quik Integration Package

Project Planning Support

The goal of every integrator is to bring the product to market on time and under budget. Our Integration Specialists have extensive experience and expertise to assist you in accomplishing these goals. Through co-operative meetings a project plan will be developed that includes technology review, timelines, milestones, and certification requirements. AIRDESK will also help identify potential obstacles which may stall or seize the deployment of a project.

Engineering Support

AIRDESK's M2M Integration Packages provides for eight (8) Engineering Support incidents. We define an "INCIDENT" as one unique technical issue or support request and a reasonable effort to resolve the concern. A unique technical issue is a problem that cannot be broken down into subordinate issues. Our Engineers will utilize their best efforts to resolve each incident submitted by you via phone, email, and web communication. We will then record and document each incident and its resolution, tracking the time it is open, and escalate when required – making every effort to ensure your continued success of deploying your project.

Two Test Modules

To obtain continuity throughout the duration of your project, this package provides two (2) modules for integration testing. By proactively providing additional modules, integrators have the flexibility to troubleshoot behavioral differences in products, conduct simultaneous software and hardware integration, as well as prepare for possible damages to existing modules.

Subscription to AIRDESK's Wavecom AirSource

AirSource is a web-based tool linking your integration team to a wealth of informational resources 24x7. The knowledgebase contains documented solutions from both AIRDESK and the device manufacturer. AirSource includes AIRDESK'S acquired aptitude of the product, downloads - including firmware updates and enabling software, white papers, industry specifications, application notes, Technical Support Bulletins (TSBs) and marketing materials.

Documentation Package

AIRDESK has designed a CD specifically geared towards providing integrators with the necessary documents, software and industry links required during the development and testing phase of a project. Upon submitting your initial order, we will provide you with your first CD, followed by two (2) supplementary CD updates. Additionally, these updates are extended to you through AirSource - AIRDESK's extensive knowledgebase tool.

Provisioning Test Package (optional)

AIRDESK will provision and activate the two modules, with customer's authorization, properly configured for your development effort from one of the leading Wireless Carriers. Established as a National Activation Center, AIRDESK can provide the necessary resources and support services, backed by the technical expertise and extensive experience in the wireless data market to properly provision the wireless data activations for successful development.

Module Developer Kit

Development Platform

Development Modules (2)

Documentation Suite on CD

DB9 Serial Interface Cable

Power Supply

Dual-Band Magnet Mount Antenna

Audio Test Handset

Sample RF Adapter Cable

Sample System Interface Connector*

Hands-Free Accessory

* Early release Edition package will not initially include this part due to supply lead-time.
