

## Professional Services

Thousands of customers have relied on AIRDESK to help make their wireless data communications a reality.

AIRDESK's professional services team is focused on every aspect of your M2M implementation to ensure its success. We provide expert integration, certification and regulatory support so that you can experience the benefits and ROI of wireless data communications before your competition does.

Led by industry experts, our Professional Services are designed to ease the complexity of M2M and promote rapid and efficient deployments.

[Expertise and attention to detail bring unprecedented management services to your M2M initiatives.](#)

AIRDESK's diversified Professional Services team of solution correspondents, accomplished engineers, business plan consultants, project managers, and wireless industry experts provide you with an additional resource for building your internal capabilities without increasing your company's overall operating expenses.

We apply skill, experience, and technical proficiency to your most challenging wireless communication projects. AIRDESK delivers complete solutions:

- Project Management
- Technical Support Packages
- Consulting Services
- Integration Testing Services
- Wireless Product and Business Planning
- Carrier Support and Network Evaluation

- Activation and Provisioning
- Logistics and Kitting
- Knowledge Base of Systems Integrators, Network Operators and Hardware Vendors

[Customers have access to the largest online repository of wireless data communications and M2M information available anywhere.](#)

Through our AirSource™ database, you have access to the details and specifications of thousands of wireless data communications technologies from leading industry vendors and the expert advice and counsel you need to make the right choices.

[The success of your wireless data M2M application is on the line.](#)

AIRDESK Professional Services encompasses all aspects of your business including hardware analysis, application design and executive-level strategic planning. Understanding the requirements of developers and systems integrators is what we do. But helping our customers thrive in the wireless industry with the best data tools, technical knowledge and implementation expertise available is what we do best.
